

APPENDIX 1 to AMC for CAR-66

AIRCRAFT TYPE RATINGS

FOR CAR-66 AIRCRAFT MAINTENANCE ENGINEER'S LICENCE

The following aircraft type ratings should be used to ensure a common standard throughout India.

The inclusion of an aircraft type in the licence does not indicate that the aircraft type has been granted a type certificate under the Aircraft Rule No. 49A and CAR-21, this list is only intended for the maintenance purposes.

In order to keep this list current and type ratings consistent, such information should be first passed on to the DGCA daw@dgca.nic.in by affected personnel or organizations to issue a type rating that is not included in this list.

Notes:

When a modification is introduced to an aircraft type rating or an engine designation in the rating which affect licences already issued, the existing ratings on the AME licences may be updated upon the applicant's request. Such requests can be made through the eGCA portal by availing the service titled "AME CAR-66 Licence – Amendment Service (AAL)".

Notes on aircraft modified by Supplemental Type Certificate (STC):

- When an aircraft has been modified by an STC for installation of a different engine, the CAR-66 type rating of this aircraft may change i.e. from Group 2 to Group 1. This is not reflected in this document. In case the applicant to a licence faces such a case, the holder of AME License may inform the DGCA and a new type rating will be defined by the DGCA

Notes on Type Rating (TR) endorsement covering several models/variants:

The endorsement of a type rating (TR) on the Aircraft Maintenance Engineer's (AME) licence covering several models/variants, does not automatically imply that the AME licence holder has acquired the appropriate knowledge on each model/variant. In fact, the AMEL holder may only have received TR training and/or gained experience that was limited to one or several model(s)/variant(s) but not to all models/variants.

To demonstrate adequate competence on the relevant model(s)/variant(s), the AMEL holder and/or the maintenance organisation where the AME licence holder is contracted/employed, is (are) responsible to verify that model/variant has been adequately covered by the TR course or gained experience and is up to date.

In the following tables:

- The column 'TC Holder' includes the TC holder as defined in the Type Certificate Data Sheets TCDS (EASA, FAA or other) or the specific airworthiness specifications (SAS).
- In Group 3, a third column has been added which is called 'Type of structure' and

which intends to assist the DGCA in identifying the experience required for this type with a view to removing existing limitations on the licence.

- Wooden structure covered with fabric is considered to fall under wooden structure.
- For Aeroplanes with a combination of structures; e.g. metal tubing fuselage and wooden wings, both experience 'metal tube covered with fabric' and 'wooden structure' are required.
- In Group 3, a fourth column has been added which is called 'MTOM' and which intends to assist in identifying the aeroplanes types where the Maximum Take-Off Mass (MTOM) is:
 - above 2t requires a B1.2 and B2 or B2L licence, or
 - 2t and below requires a B1.2 or B3 and B2 or B2L licence.

Column 1 includes the TC holder as defined in the TCDS (EASA, FAA or other).

For aeroplanes of group 1 and 2 and helicopters, the Column 2 includes the aircraft models as defined in the relevant TCDS (EASA, FAA or other).

The following column includes the "commercial designation" when available.

Column 3 includes the relevant individual type rating. Only the designations of ratings in column 3 should be used for endorsing individual type ratings on CAR-66 licences.

Note: Aircraft STC data are not included in this table.

Group -1 Aeroplanes

Group -1 Aeroplanes			
1. TC holder	2 Aeroplanes Model	Commercial Designation	3 Type Rating Endorsement
Airbus	A310-304		Airbus A310 (GE CF6)
